DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Drawings

2. Figure 11 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

4. Claims 6 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Ichikawa et al., US Patent No. 6,057,897.

Art Unit: 2871

The above claims are anticipated by Ichikawa et al. figures 16A-16B which disclose a projection display device comprising a light source (8), an electro-optical device (2), and a projection device (1).

It should be noted that, in claims 6 and 9, the limitation of "fabricated using the method according to claim ..." recites a one-step process which does not further limit the structure of the claimed projection display device. Therefore, the process limitation does not have patentable weight.

Allowable Subject Matter

5. Claims 1-5, 7-8, 10-26 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter:

The references of record neither disclose nor make obvious an electro-optical device and a method of forming the same in which a substrate having a lens array substrate provided with a plurality of convex microlenses, a planar step portion being substantially equal in height to the microlenses in a region overlapping a sealing material and a transparent cover adhered to the lens array substrate that covers both microlenses and the step portion as set forth in claims 1, 4, 7, 10, and 12-16.

Art Unit: 2871

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
